

Mr Sun

AI Solutions Architect | Tech Lead | AWS Cloud Specialist

stoneskin@gmail.com | linkedin.com/in/stoneskin | github.com/stoneskin

Professional Summary

Seasoned Software Architect and Tech Leader with **20+ years** of experience in .NET web development, system architecture, and cloud solutions. Expertise in full-stack development, DevOps, and SaaS solutions. Proven track record in leading teams, driving innovation, and optimizing system performance.

Currently leading: AWS Migration Initiative at iPipeline (Tiger Team) - migrating legacy on-prem applications to AWS with modern CI/CD pipelines.

Open source: Creator of open-memex, a local-first memory layer for AI coding agents (MCP server + CLI, published on npm).

Core Competencies

- AI/ML Integration (LLM, NLP, RAG, AI Agent Systems)
- Software Architecture & Cloud Solutions (AWS)
- Full-Stack Development (C#, React, Node.js, Python)
- DevOps & CI/CD Automation (AWS CodePipeline, Jenkins, Docker)
- Team Leadership & Technical Mentorship
- System Integration & Performance Optimization

Technical Skills

Category	Skills
Programming	C#, JavaScript/TypeScript, Python, Java, SQL
Web	ASP.NET Core, React.js, Redux, HTML5/CSS, REST APIs
Cloud	AWS (Lambda, EC2, S3, DynamoDB, SAM, CloudFormation, Fargate)
Databases	MS SQL Server, MongoDB, Redis, PostgreSQL, Oracle, MySQL
DevOps	GitHub Actions, Jenkins, Docker, Terraform, CI/CD
Tools	Git, Jira, Docker, Jenkins, Postman, VSCode
Auth	SAML, OAuth, PingFederate, Ping Access, Ping Directory
AI/ML	LLM, NLP, RAG, MCP, OpenAI, HuggingFace, MS Copilot Studio, Google Colab
Methodologies	Agile, Scrum, TDD, CI/CD, SOLID, Design Patterns

Professional Experience

iPipeline, Inc. (A Roper Technologies Company) — PA

Expert Software Engineer (Tech Lead, Tiger Team), R&D | April 2013 – Present (12+ years)

Title progression: Lead Developer → Solution Architect → Expert Software Engineer

- Lead a team of 6 developers and 2 QA engineers, managing and building **40+ applications** (legacy

and new)

- Architect and deploy multiple AWS serverless solutions, reducing operational costs
- Design and implement blue-green deployment strategy, reducing downtime and release risks
- iPipeline's Ping/OAuth identity expert — go-to resource for PingFederate, PingAccess, PingDirectory, and enterprise SSO (SAML/OAuth) integrations across teams

Key Projects:

Project	Description	Tech Stack	Impact
Quote AI Agent	NLP-powered prototype using LLMs and prompt engineering for Quote Web UI	OpenAI, LLM, Prompt Engineering	Prototype
Calc-Engine AWS Serverless	Migrated quote engine to AWS SAM with GitHub Actions CI/CD	AWS SAM, Lambda, DynamoDB, GitHub Actions	70% performance improvement
iSolve Quoting Solution	iPipeline's first cloud-native application	AWS (EC2, S3, Lambda, API Gateway, DynamoDB, SQS, CloudFormation)	Pioneering cloud adoption
Quote Client & Web API	SPA with modern deployment	React.js, Redux, .NET Core, Docker	Blue-Green deployment
Next-Gen Quote Engine (CalcStorm)	Node.js-based calculation engine	Node.js, React.js, MongoDB, JWT, Webpack	Modern architecture
Auth/PingFederate	Enterprise SSO integration	SAML, OAuth, PingFederate	Secure authentication
Tiger Team - Ping Identity AWS Migration (2025-2026)	Lift-and-shift PingAccess, PingFederate, PingDirectory, PingDelegatedAdmin from on-prem to a dedicated AWS account	CloudFormation, EC2/ASG, ECS Fargate, EFS, ECR, ALB/NLB, Route 53, SSM, KMS, EC2 Image Builder, GitHub Actions (OIDC)	In Progress

Comcast Corp (via Turnberry Solutions) — PA

Senior .NET Lead Developer | Sep 2012 - Apr 2013

- Designed, developed, and maintained .NET (C#) web applications
- Led CI/CD pipeline implementation, reducing deployment time

Key Projects:

- **Café:** Widget-based customer management GUI using .NET MVC3 & jQuery
- **Auto Deployment Solution:** Windows Service & Web GUI for automated deployments

Kemper Corporation — PA

Senior Web Application Developer | May 2010 - Aug 2012

- Designed and maintained .NET web applications with mobile app & API integrations
- Led source control & auto-build deployment revolution, improving development efficiency

Key Projects:

- **New Policy Holder Service:** Built with ASP.NET 4 & MVC3, optimizing user experience
- **UDILibrary (3-Tier Architecture):** Refactored using IoC & WCF, improving modularity

Broadview Networks — PA

Web Application Developer | Apr 2003 – May 2010 (7+ years)

- Independently designed and developed multiple internal web applications
- Developed applications across MS SQL Server, Oracle, MySQL
- Built J2EE/JSP-based solutions

Key Projects:

- **Billing Management Web GUI:** Architected using ASP.NET 3.5 & MVC Frameworks
 - **Jeopardy Reporting & Management GUI:** ASP.NET 2.0, C#, JavaScript, nHibernate, SQL Server
-

Current Focus (2025-2026)

Tiger Team - Ping Identity AWS Migration

Objective: Lift-and-shift iPipeline's on-prem Ping Identity stack (PingAccess, PingFederate, PingDirectory, PingDelegatedAdmin) into a dedicated AWS account (us-east-1, multi-AZ), with zero-downtime blue/green cut-over across Dev, QA, UAT, and Production.

Role: Technical lead for migration architecture, infrastructure-as-code, and CI/CD — owner of the migration guideline and cross-team coordination (IT/Ops, security, application teams) on network segmentation, secrets management, and cut-over rehearsals.

Key deliverables:

- Retired Jenkins + Octopus Deploy; built GitHub Actions pipelines with OIDC federation (no long-lived AWS keys) and environment-gated approvals (Dev / QA / UAT / Prod). Designed a three-workflow release architecture (infrastructure / Golden AMI image build / application) plus a one-click bootstrap orchestrator for fresh AWS accounts.
 - Designed blue/green topology with parallel primary/secondary slots and Route 53 DNS cut-over for zero-downtime migration.
 - Authored CloudFormation IaC for the full Ping stack: PingFederate (Admin/Runtime on EC2 + ASG), PingAccess (Admin EC2 + engines on ECS Fargate with self-built Docker images and per-account ECR fallback), PingDirectory, PingDelegator on Fargate — plus networking and security (IAM, KMS cross-account grants, SSM).
 - Built a 500-concurrent-user load-test harness; delivered an on-prem vs AWS comparative baseline report and autoscaling policies for PingAccess/PingFederate runtime services.
 - Resolved customer-facing issues surfaced during migration, including a PingFederate path rewriter that fixed a NYL SAML session-timeout.
-

Open Source & Community

open-memex

2026 – Present

- Open-source project: a local-first memory layer for AI coding agents.
- Markdown as source of truth with SQLite FTS5 search; MCP server + CLI + editor integrations; human-reviewed memory capture; team knowledge sharing through git PRs.
- Published on npm with public development on GitHub.
- Repository

MLCCC Chinese Characters Recognition App

July 2023 – Present

- Developed and donated a web application to the Mainline Chinese Culture Center for community use
- **Tech:** JavaScript, HTML (responsive), PHP, MySQL, Google Dictionary API, Hugging Face OpenAI API (LLM)
- Open-sourced project and mentored multiple high school and college students

- Repository

Minecraft-Python

2019-2020

- Created tutorials on learning Python through Minecraft, making programming engaging and interactive
- Developed multiple Minecraft plugins using Python
- Enhanced gameplay and customization for educational purposes

Programming Classes (MLCCC)

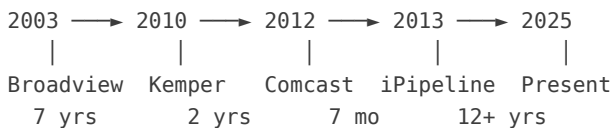

Teaching programming to K-12 students:

Class	Grade	Tech	Schedule
Scratch	G2-5	Scratch Animation & Game	Sunday 3-4PM
Python	G6+	Python syntax, algorithms, web	Ended July 2026
Java	G8+	Java + AP CSA prep	Private/Online

Education & Certifications

Credential	Institution/Organization	Details
MS Computer Science	Villanova University, PA	GPA: 3.85/4.00
Software Engineering Certificate	Villanova University	
Sun Certified Programmer for Java 2	Sun Microsystems	
OCA Oracle 9i DBA Certification (SQL)	Oracle
